Description

Murray Constant Tension Worm Drive Hose Clamp, 57-79mm (2.25" - 3.13")

This constant tension design of clip is recommended for use with Silicone hoses when fitted to turbocharger compressor outlets and intercooler pipe work. It's unique design compensates for the effects of thermal cycling and compression set of the hose. Used by WRC rally teams worldwide, its fitment will reduce the risks of hoses coming loose and blowing off, which in the case of turbocharged cars, could prevent overspeeding of the turbocharger and inevitable failure.
